June 7, 2020

Dear Fellow Owners and Occupants,

Isn't it great, days are getting longer, trees are in bloom, grass is looking like grass, nice lush green?

Speaking of green grass, our irrigation system has been turned on for the summer, in our effort of cost cutting, we are continuing to water on two days (Stage 2) as oppose to the three we did two years ago. If we see that our lawns and trees are in need of more water, and the Town is not insisting we stay on Stage 2, we will definitely revisit. Our watering days are still on Wednesday and Saturday mornings.

Other effective water saving and cost cutting approaches would be:

- not watering your gardens on Wednesday and Saturday and only if it's needed on the other days
- not hosing down your driveway (sweep it instead)
- not washing your vehicle in your driveway – this coincides with our own Bylaw #62
- We know there are other means of water conservation, but these are a few that came to mind.

If you have any issues with sprinklers in your area please let us know, by replying to this email, as soon as possible and we will adjust it ourselves or have Farmboys come and make the adjustment.

For those of you living on the South side, we will be increasing the waterflow to the trees in the near future, enlarging the irrigation heads and at that time turning off the black water spikes.

Any questions or concerns please contact us at the e-mail listed below.

Regards
